

Figure 1 consists of two panels. The top panel is a large horizontal stacked bar chart showing the fraction of simulated events for 100 different models. The x-axis is labeled 'fraction' and ranges from 0.0 to 1.0. The y-axis lists the models, grouped by track (SSE, hybrid, etc.) and parameters. The bars are color-coded: orange for 'BBH' (Binary Black Hole) and blue for 'SN' (Supernova). The bottom panel is a smaller vertical scatter plot showing the distribution of the parameter $\mathcal{R}_m$ [Gpc⁻³yr⁻¹] for the same models. The x-axis is logarithmic, ranging from 10⁰ to 10². The y-axis is labeled $\mathcal{R}_m$ [Gpc⁻³yr⁻¹]. The scatter plot shows black dots for each model, with a grey shaded region indicating a specific range of values.
